

# Why use the ROOFBOX™ System?

**S Series** | Standard size range

**B Series** | Bespoke range

**M Series** | Modular range

**K Series** | Modular kerb range

“ROOFBOX™ is a proprietary solution designed specifically to address the inherent weathering problems surrounding roof penetrations”

roof products  
**NICHOLSON**

## Peace of mind

A warranted solution providing clients and contractors assurance. Roof warranties can be compromised by service penetrations through the waterproofing layer. The ROOFBOX™ system provides a unique way to achieve a full roof warranty.

## Eliminates the risk of leaks

Roof detailing at penetrations is critical for a long roof life. Ad-hoc or 'dog kennel' solutions can result in water ingress due to poor detailing or workmanship leading to costly repairs later in the buildings life.

## Safety

The ROOFBOX™ system can be used as part of the safety management plan. Including them early in the contract can help meet the requirement for temporary barrier protection and/or weathering at the riser opening during the installation phase of the contract.

## Cost saving

- ✓ Avoids multiple return visits by the roofing contractor
- ✓ Avoids claims for hidden extra works.
- ✓ Avoids the extra costs associated with architectural and structural design.
- ✓ Reduces labour costs

## Enables a proactive approach

The careful detailing of the ROOFBOX™ system addresses the multiple and varying problems associated with service penetrations in advance of the need. The system's capabilities include all types of weathering for ductwork, pipes, cable trays, air intakes, vents, etc.

## Designed for your project

The ROOFBOX™ system can be tailored to suit all roof constructions and roof opening sizes. Full design and working drawings are provided as part of the package.

## Repeatable

ROOFBOX™ provides a system that is consistent in terms of both aesthetic appearance and design philosophy, that can be repeated on multiple risers, multiple roofs and multiple buildings.

## Future-proof

The accessible panels can easily be removed and replaced to allow passage of new services at a later date without the need for a roofing contractor being in attendance.

## Aesthetically pleasing

The ROOFBOX™ system can be supplied in any RAL colour, and the durable, well-proportioned design ensures a professional and attractive end result.

## Thermal performance

Every ROOFBOX™ is fully insulated with a prescribed U-value, ensuring that the thermal performance of the building is optimised at the riser position
