

A Nicholson 'Train your Team' Presentation:

Details: **The importance of ventilation in lead roofing**

Duration: Approx. 45 minutes

Session Type: Online presentation

Content and what to expect:

This session is designed to educate contractors as to why ventilation in lead covered roofs is so important, what can happen if this is not considered and what is depicted as the standard in BS5250 Control of Condensation in Buildings. It will help you to understand the following topics:

- A brief history of lead roofing
- Why do we need to ventilate lead roofs?
- Interstitial condensation and its causes
- Other sources of moisture in lead roof voids
- The relevant regulations
- Types of roof construction for lead roofing
- How much ventilation is required?
- Products that can help you meet the regulations and ventilate correctly
